(An Autonomous Institute affiliated to SP Pune University)

T.Y. B. Tech. /Semester-VI /Div-A/2023-24

Computer Science and Engineering (CS)

Elective I Data Warehousing and Mining (UCCSL308(F))

Questions	BL	CO	PO
Q1. Discuss the data mining and its types?	2	1	1
Q2. State three different applications for which data mining techniques seem appropriate. Informally explain each application.	1	1	1,2
Q3. Describe the various challenges of implementation in data mining.	2	1	1
Q4. Explain the basic building blocks or components that are used to construct a data mining process.	2	1	1,3
Q5. Describe the advantages of data mining task primitives.	2	1	1
Q6. Discuss whether or not each of the following activities is a data mining task: i. Computing the total sales of a company. ii. Predicting the future stock price of a company using historical records.	2	1	1,3,5
Q7. Discuss whether or not each of the following activities is a data mining task: i. Dividing the customers of a company according to their profitability. ii. Monitoring the heart rate of patient for abnormalities.	2	1	1,3,6
Q8. Explain the difference between information and data.	2	1	1,2
Q9. Explain the different types of attributes with example.	2	1	1
Q10. Illustrate short note about continuous and discrete data.	3	1	3,4
Q11. Discuss how is data warehouse different from a database? How are they similar?	2	2	1,2
Q12. List and explain the key features of data warehouse.	1	2	1,2,3
Q13. Illustrate the need of data warehouse.	3	2	2,3,4
Q14. Compare OLTP System and OLAP System.	4	2	4
Q15. Discuss the following: i. Star schema ii. Snow Flake schema	2	2	2,3

Q16. Compare fact table and dimension table.	4	2	1,2
Q17. Draw a star schema diagram for the data warehouse consists of three dimensions time, doctor and patient and the two measures count and charge, where charge is the fee that a doctor charges a patient for a visit.	3	2	3,4,5
Q18. Draw a snowflakes schema diagram for the data warehouse for a university consists of the four dimensions: student, course, semester and instructor, and two measures count and average grade. When at the lowest conceptual level, the average grade measures stores the actual course grade of the student. At higher conceptual levels average grade stores the average grade for the given combination.	3	2	3,4,5
Q19. Explain the following OLAP operations with example. i. Roll-Up ii. Slice and Dice	2	2	1,2
Q20. Differentiate between ROLAP, MOLAP, and HOLAP	4	2	1

<i>Blooms Taxonomy level</i>	1: Remember, 2: Understand, 3: Apply, 4: Analyse, 5: Evaluate, 6: Create
